PROFESSIONAL SUMMARY

Fresh Computer Science graduate with hands-on experience developing and improving web applications, dashboard systems, API integrations and custom frontend components. Experienced with JavaScript, TypeScript, Node.js, Svelte, Vue.js and REST APIs through industrial training and academic projects. Comfortable working with existing codebases, troubleshooting implementations, researching unfamiliar technologies and refining solutions based on technical requirements and feedback.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Dart

Frameworks & Development: Svelte, Vue.js, Node.js, Vite, Flutter

Data & Integration: REST APIs, Public APIs, Firebase, Firestore, MapLibre GL JS

Tools: Git, GitHub, Postman, Swagger, Figma, VS Code, npm, Vercel

Technical Exposure: QGIS, HEC-HMS, HEC-RAS, SWMM, UFIM, Digital Twin Platforms

EXPERIENCE

Software Developer Intern — Digital Twin Team

Impact Business Solutions Sdn. Bhd. | Mar 2026 – Aug 2026

- Implemented and refined Digital Twin dashboards using RayChange DeepBuilder, translating Figma designs into functional interfaces, configuring interactions, integrating API data, and troubleshooting implementations across all six dashboard pages of a Water Treatment Plant project, with additional contributions to MINDEF and SDMC dashboards.
- Developed and modified Vue.js custom components to extend functionality beyond standard platform components, enabling font customization, embedded live-content integration, and email and Telegram notifications; validated API behaviors and integrations using Postman and Swagger.
- Researched and evaluated HEC-HMS, HEC-RAS, SWMM, UFIM and QGIS for urban flood-modelling workflows, comparing tool capabilities, data requirements and limitations through hands-on exploration, technical documentation and presentation of findings that supported the team's selection of UFIM for surface urban-flood modelling.
- Enhanced an existing Node.js, Svelte and Vite World Monitor dashboard, restructuring its single-page interface into dedicated Overview, Weather and Intel pages and developing public-API-driven map visualization, filtering and navigation while exploring caching and approaches to reduce unnecessary API requests.

PROJECTS

World Monitor Dashboard — Internship Project

Svelte · Vite · Node.js · MapLibre GL JS

- Restructured an existing single-page monitoring dashboard into dedicated Overview, Weather and Intel views, improving information organisation and creating a clearer structure for future feature expansion.
- Developed map-based monitoring, weather and intelligence views using public data sources, implementing filtering and navigation while exploring caching strategies and approaches to reduce unnecessary API requests.

MYAgriTopia — Final Year Project

Flutter · Dart · Firebase Firestore · Firebase Authentication · OpenWeather API · Decision Support System

- Developed a mobile agriculture decision-support application integrating weather forecasts, soil and climate information, crop planning, farm-management functions, and pest and disease support into a unified platform for agricultural decision-making.
- Implemented a scan-based pest and disease detection feature that allows users to scan affected crops, identify possible pest or disease conditions, and receive relevant recommendations for follow-up action.

EDUCATION

Bachelor of Computer Science with Honours (Network Engineering)

Universiti Malaysia Sabah | 2022 - 2026 | Current CGPA: 3.26

Achievements & Leadership

- Dean's List — Semesters 4 & 7
- Best Idea Award — TECHTREK Innovators Pitch Challenge (2024)
- Network Engineering Cohort Class Representative (2023–2026)

CERTIFICATIONS

Cisco Networking Academy

- CCNAv7: Introduction to Networks
- CCNAv7: Switching, Routing & Wireless Essentials
- CCNAv7: Enterprise Networking, Security & Automation
- Cybersecurity Essentials

Huawei Certified ICT Associate

- HCIA – Cloud Computing | Valid through Dec 2025
